

Title: Sustainable Batch Plants through Innovative Solutions

EME has a proven track record in designing and commissioning over 250 plants worldwide. Part of the SORG Group, we access next-generation technology to gain unrivalled knowledge in sustainable conditioning and melting.

To help the glass industry overcome the daily challenges, we keep improving our technologies and processes and create ground-breaking solutions that mould the future. What sets EME apart is our proven capability to upgrade a plant while it is live and operating, with no loss of production. In addition, complete turnkey solutions, from raw material and perfectly mixed batch delivery to supporting you in engineering design, our tailored approach makes EME the future partner of choice, whatever your needs.

Innovation, it's in our DNA. For more than a century we've led the way through a unique passion for glass. Improving batch plants with tailored solutions and the best technology available, we are a customer-centric, sustainable partner dedicated to delivering greater reliability, quality, flexibility and longevity.

As a company, EME has a special obligation to act sustainably and with a future-oriented approach. Through the use of modern technologies and processes, EME strives to continuously minimize environmental impacts and reduce its ecological footprint. EME promotes resource conservation by responsibly managing materials and energy, considering recyclability already during product development, and reducing waste and emissions, as well as preventing environmental pollution.
